

AvaSpec-NIR256/512-2.5-HSC-EVO NIRLine Near-infrared Fiber Optic Spectrometer

New High Sensitivity Compact NIR Spectrometers!

The new and improved versions of our NIR spectrometers offer more sensitivity, less weight and less size. They are based on a 100mm optical bench with a NA of 0.13 offering optimal balance between resolution and sensitivity.

The 2.5-HSC series feature 256 or 512 pixel InGaAs detectors and are available in multiple configurations. These instruments are perfect for grain, corn, wheat, soya, polymers but also for medical uses, process monitoring and other analysis. The 256 pixel detectors offer best sensitivity for most applications. For applications where resolution is key, or more datapoints for modelling is required, the 512 pixel detector will be the best choice.

A range of gratings are available offering the possibility to tailor the instrument for optimal performance in your application. The instrument is equipped with a replaceable slit which offers you great flexibility in your experiment.

Also available on the -HSC is the userselectable gain setting mode: LN(low- noise, standard setting), which gives you a longer integration time and higher signal to noise ratio, or HS (high-sensitivity) for measuring in lowlight conditions. Analog and digital IO ports enable external triggering and control of shuttered and pulsed light sources from the AvaLight series. The EVO instruments use the AS7010 electronics board offering USB3 (10 times faster than USB2), Gigabit Ethernet and better signal processing.
