SpectralLED® RS-7-3 Tunable Light Source - Fiber Optic Output

The SpectralLED® Fiber Optic Output configuration provides flexible illumination for applications where space is limited. Systems can be configured with multiple outputs enabling several devices to be simultaneously illuminated at different working locations. Collimating optics are included at the fiber distal end, and custom fiber diameters and lengths are available.

The SpectralLED® Tunable Light Source incorporates up to 35 discrete wavelengths for synthesis of commercially available light sources or based on spectra that you import. The platform is easily adaptable for automated test systems and production line integration, with integrated optical feedback and temperature control to ensure rock-solid stability and consistent results.
